The C++ component of the Visual Studio IDE is not very intuitive to me. I am trying to use Test-Driven Development to write unit tests and I am still struggling to understand how to do it. The Visual Studio main menu gives me the option to create a new test project. The prompt says you can either create a template or "creating a new project". If you create a new project, there is a dialog screen where you can select a template, giving you a list of "pre-created" projects. But when I select the "Create" option, a dialog opens up and says "Create a Visual Studio project." No, I don't want a "Visual Studio project" (I don't want the boilerplate code that seems to be the by-product of a "Visual Studio project"). I want a unit test project. I have a "Visual Studio Project" already. I just want a "Unit Test Project" (or something that allows me to write tests). According to MSDN, there are 3 ways to create a test project: Create a new unit test project from the Test View command. Create a new test project from the "Test View" dialog. Use the "Templates" command to add a test project to the solution. If I select option 1, I get the following error: What the **** is going on here? I don't have any Visual Studio Project templates, and I certainly don't have any Unit Test Project templates. When I run the "Templates" command, I get this: This shouldn't be a question, because the answer is right here in the documentation. I don't get why it isn't. A: Select Tools->Test View. It will have an option to create a new test project. A: Assuming you are running Visual Studio 2010, I was facing the same problem. I clicked on the template name, and selected "Create new test project" from the context menu 1cdb36666

Apparatuses for adjusting a vehicle characteristic are known from the state of the art. For example, DE 10 2007 020 688 A1 shows a device for adjusting a vehicle characteristic, comprising a driving device for adjusting a characteristic of a vehicle, a control device for controlling the driving device, and the driving device comprising a control unit for detecting control signals and generating first control signals that are provided for controlling at least one adjusting unit for adjusting the vehicle characteristic. The adjustment apparatus for a vehicle comprises a driving device for adjusting the characteristic of a vehicle. The driving device comprises a first control unit for detecting control signals and generating first control signals for controlling at least one adjusting unit for adjusting the characteristic of the vehicle. The adjustment apparatus for a vehicle comprises a control device for controlling the driving device. The control device comprises means for transmitting control signals to the driving device for controlling the driving device. The control device comprises means for generating a feedback signal representing the characteristic. The control device comprises means for detecting the feedback signal and for controlling the first control unit. The means for detecting the feedback signal comprise a second control unit that comprises an electronic controller for generating control signals to the driving device for controlling the driving device. The second control unit is connected to the first control unit. The second control unit is arranged for generating control signals to the driving device for controlling the driving device. DE 10 2008 057 018 A1 shows a device for adjusting a vehicle characteristic, comprising a driving device for adjusting the characteristic of a vehicle, a control device for controlling
